La French Tech presents 7 high-profile and awarded startups at Computex 2019 in Taipei

La French Tech is coming back to Computex, with the strongest delegation ever. Impressive award-winning French startups will land in Taiwan in the InnoVEX show.

TAIPEI, TAIWAN – April 25th, 2019

Seven as a magic number, the composition of this year's French delegation is seriously impressive. All of them already stole the show in major tech events around the world. The awards and accomplishments of those seven high-profile startups are jaw-dropping: CES Best of Innovation Award for **Energysquare** (ground-breaking and efficient wireless charging technology); CES Innovation Award for **Adok** (they can transform any desk into an interactive workplan); another CES Innovation award for **Digitsole by Zhor-Tech** (their smart soles help doctors treat better, with personalized walking profiles). French champions in artificial intelligence will also participate actively: **Quantmetry** uses AI to accelerate the diagnosis of cancer and other diseases, and **Hoomano** aims to improve human-machine interactions, developing applications on the robots *Pepper* and *Nao*. On top of that, **Mapwize**, a powerful indoor mapping and wayfinding platform is already partnering with *Cisco*, *Microsoft* and *Rise Hong Kong*. Finally, **Virtual Room** is bringing the next level of VR experience. They have already settled in more than 20 cities around the world, including Los Angeles, Singapore and Paris. Taiwan is their next station.

As Computex is the most important tech event in Asia, la French Tech powered by Business France is presenting a powerful delegation for the 4th consecutive year. From May 29th to 31st, startups from France will be, once again, the center of attention in the InnoVEX international zone, making la French Tech one of the must-sees of the show.

Business France is the national agency in charge of the French Tech pavilion in global prime tech events such as CES Las Vegas, Mobile World Congress, SXSW, Web Summit and so on. The continuous partnership with TAITRA and TCA shows their strong connection and commitment to bring the best of technology directly from France.

Another important partner this year is Taiwan Industrial Innovation Platform (TIIP), the R&D subsidy program under IDB, MOEA. Partnering with the French public investment bank Bpifrance, TIIP supports French and Taiwanese companies for their collaborations in R&D of innovative products with clear advantage and unique added-value. The program would provide necessary assistance and funding to selected projects.

Rendez-vous at Computex / InnoVEX 2019, May 29th to 31st !

The French Tech delegation at Computex 2019 is composed of :

Hoomano

Allowing everyone to communicate instinctively with technology

HOOMANO has been creating robotics business solutions since 2014. A long-standing partner of Softbank Robotics in Japan and Europe, the company develops applications on the robots Pepper and Nao, while also collaborating with other robot manufacturers. Besides, using artificial intelligence research, the company offers a reliable attention evaluation technology: robots "powered by Hoomano" become engaging and autonomous interfaces that challenge and arouse emotion. Whether in product demonstration, customer relationship management or business processes improvement, Hoomano brings you more instinctive interactions with social robots.

Quantmetry

Building AI with pioneers

Quantmetry develops itself in a market where mathematicians and computer scientists have an impact that could transform the economy. Now with a team of 90 members whose time is partly dedicated to R&D, Quantmetry specializes in Artificial Intelligence as a pure player of data that accompanies enterprises from design to implementation of AI solutions. The company has a state-of-the-art expertise in domains such as Deep Learning, computer vision and natural language processing, with applications notably in MedTech, Smart Cities and Industry 4.0.

Energysquare

Charging made easy

Energysquare's Power by Contact® is a breakthrough wireless charging technology for laptops and other portable electronic devices. Using conductive charging, this patented technology allows users to charge multiple devices at a time at the same speed of using a normal charger. Simply place the devices freely on the charging area to start charging – as simple as it could be.

About Bpifrance x Taiwan Industrial Innovation Platform (TIIP) FR-TW Cooperation Mechanism

The FR-TW cooperation mechanism between Bpifrance and TIIP requires at least one French company and one Taiwanese company. Both sides should sign the MoU before submitting the R&D proposal to Bpifrance and TIIP respectively. Besides, balanced partnership is requisite. The budget share of each side should not exceed more than 75%-25% of the total budget of the project. An additional 20% in R&D subsidy will be granted to those who cooperate with French companies; however, the subsidy shall not exceed 50% of the total expenditure.

About La French Tech

La French Tech is the term used to describe the French startup community and the dynamic, vibrant ecosystem: entrepreneurs, investors, engineers, designers, incubators, publics organizations, etc. committed to the growth of French startups and to their international prosperity. Since its creation in 2013, La French Tech can be seen in major tech events with the support of Business France. In 2019, La French Tech has already been under the spotlight for its strong presence: 350+ French startups at CES Las Vegas, and biggest foreign delegation in Mobile World Congress with more than 100 exhibitors.
