

FoodTech Trailblazer Goodfoodeveryday (Semii) Debuts at InnoVEX 2026, Bridging High-Protein Innovation and Blood Sugar Management

TAIPEI, Taiwan – As **InnoVEX 2026**, the global stage for tech startups, opens its doors to a sea of AI and semiconductor innovations, one participant is set to stand out by appealing to the senses. **Goodfoodeveryday CO., LTD.**, known in the United States as **Semii**, is bringing a distinct and delicious flavor to the tech-heavy exhibition, proving that the future of wellness is as much about culinary craft as it is about hardware.

A multiple award-winner in its home market of Taiwan, **Goodfoodeveryday (Semii)** has transcended its origins as a high-protein noodle developer. At this year's event, the company is positioning itself as a comprehensive **blood sugar management solution provider**. By leveraging nutritional science to reinvent daily staples, their functional noodles offer a tangible tool for health-conscious consumers looking to stabilize glucose levels without sacrificing the joy of a meal.

"InnoVEX is traditionally dominated by digital tech, but health begins on the plate," said a spokesperson for the company. The presence of **Semii** at InnoVEX 2026 adds a refreshing dimension to the event, inviting attendees to experience how food technology can solve chronic health challenges while delivering "Good Food Everyday."
