

FOR IMMEDIATE RELEASE

omoomi Launches Free Early Access to AI Care Companion Platform, Helping Families Stay Close Every Day

Taiwan-based startup introduces an AI companion that keeps elders company, collects their stories, and tells families how their loved one's day went

TAIPEI, Taiwan — 2nd June 2026

omoomi, Inc. today announced the launch of free early access to its AI care companion platform, designed to support elders and the adult children who care for them. Available now as a web application in Taiwan, omoomi provides daily companionship, gentle routine support, and life story preservation for elders, while delivering a calm, daily picture of how a loved one is doing to the families who cannot always be there.

For the millions of adult children managing careers, households, and the invisible weight of elder care, the hardest part is often not the logistics. It is the not knowing. omoomi closes that gap every single day.

“Every family we spoke to said the same thing: not knowing is the hardest part. We built omoomi so that no child wonders whether their elders smiled today. The answer is there, whenever life gives them a pause, in their own phones.”

— Ben, Co-founder and CEO, omoomi

What omoomi Does Today

Three features are live in early access:

- **AI Companion:** Conversational presence designed for senior care. omoomi understands hesitation, repetition, and emotional subtext, listening the way a patient friend would, never correcting. When a loved one trails off mid-sentence or repeats a story from yesterday, omoomi listens the same way every time.
- **Gentle Reminders:** Routine nudges for hydration, movement, and everyday appointments that follow the elder's rhythm, not a fixed alarm schedule. If they say "not now," omoomi circles back later with a softer nudge.
- **Life Stories:** Memories collected naturally through daily conversation and saved permanently, a family archive built one story at a time, before they fade.

Daily Digest, Ask omoomi, Post-Visit Messages, Care Handbook, and Family Dashboard features are in development and will be released in subsequent phases. A screenless, purpose-built companion device is planned for 2027.

Built on a Foundation of Trust

Privacy and dignity are not features at omoomi. They are the product. The platform always discloses itself as AI and never presents as a human companion. omoomi does not sell elder-care data or use personal conversations for behavioral advertising. The platform is designed explicitly for companionship and everyday support, not medical advice or emergency response.

“We believe every elder deserves to be seen, and every caregiver deserves to breathe. omoomi makes both possible, quietly, every day.”
— Evy, Co-founder and COO, omoomi

The Market omoomi Addresses

Taiwan has one of the fastest-aging populations in the world. Alongside Japan and South Korea, it is entering a decade of structural elder care demand that existing solutions, fragmented between medical alert devices, care management apps, and social companions, cannot meet. omoomi is built to close the loop that every point solution leaves open: integrating emotional companionship, routine support, and family connection in one calm, trustworthy platform.

Availability

omoomi is free during early access. No credit card is required. The platform is available at omoomi.io, with a Traditional Chinese interface at omoomi.io/zh-TW. Families in Taiwan can sign up today.

About omoomi

omoomi, Inc. is building the first proactive care companion platform for elders and the families who care for them. Founded by Ben and Evy, the company is headquartered in the United States with a research and development hub in Taiwan. omoomi's platform integrates emotional AI companionship, intelligent routine support, and life story preservation in one calm, trustworthy experience. The company is currently in early access in Taiwan.
